

Authentication

All requests to the Quote Engine are authenticated via an API key. If a request does not contain a valid key, the Quote Engine will return a `403` error. Requests must be sent over HTTPS.

Request Headers

Your `userToken` API key should be included in the header of all requests:

Key	Value
<code>userToken</code>	<code>{apiKey}</code>

Environments

Your `userToken` API key is the same for both the `TEST` and `PROD` environments.

Revision #6
